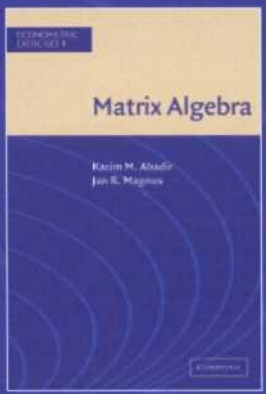
CAMBRIDGE

Announcing a new textbook series

Econometric Exercises

- Each volume has a coherent and well-organized sequence of exercises in a specific field or sub-field of econometrics.
- Solved exercises are assembled together in a structured and logical pedagogical framework.
- Each chapter begins with a short technical introduction that emphasizes the main ideas and overviews the most relevant theorems and results. The volumes increase in difficulty as the topics become more specialized.
- Each volume is self-contained, has a full index, and includes cross-reference to other volumes in the series.
- The volumes are intended for undergraduate students of econometrics with an introductory knowledge of statistics, for first and second year graduate students of econometrics, and for students and instructors from neighbouring disciplines with interests in econometric methods.



Series ISBN:
978 0 521 53357 7
(0 521 53357 0)

Series Editors:
Karim M. Abadir, *University of York*, United Kingdom
Jan R. Magnus, *Tilburg University*, The Netherlands
Peter C. B. Phillips, *Yale University*, USA

Format
Books in this series will be available in both paperback and hardback

Frequency
We expect to publish one to two titles per year

Readership
Undergraduate and graduate students

Market
Econometrics, Statistics, Applied Mathematics

Econometric Exercises

First textbook in the series

Matrix Algebra

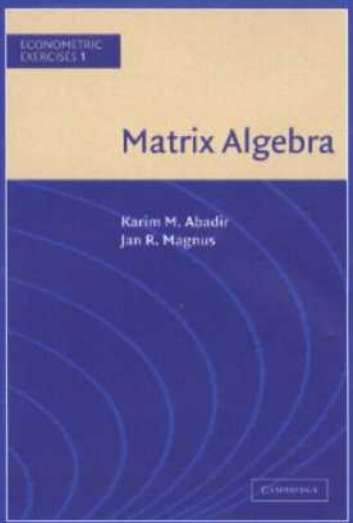
Karim M. Abadir

University of York

and Jan R. Magnus

Tilburg University

Matrix Algebra is the first volume of the Econometric Exercises Series. It contains exercises relating to course material in matrix algebra that students are expected to know while enrolled in an (advanced) undergraduate or a postgraduate course in econometrics or statistics. The book contains a comprehensive collection of exercises, all with full answers. The volume can be used either as a self-contained course in matrix algebra or as a supplementary text.



- Only text that is devoted to solved examples in matrix algebra
- Features 684 solved exercises
- Can be used either as a self-contained course in matrix algebra or as a supplementary text

Publication September 2005

Contents

1. Vectors
2. Matrices
3. Vector spaces
4. Rank, inverse, and determinant
5. Partitioned matrices
6. Systems of equations
7. Eigenvalues, eigenvectors, and factorizations
8. Positive (semi)definite and idempotent matrices
9. Matrix functions
10. Kronecker product, vec-operator, and Moore-Penrose inverse
11. Patterned matrices, commutation and duplication matrix
12. Matrix inequalities
13. Matrix calculus

228 x 152 mm | 485 pages
684 solved exercises

Country

Our inspection copy policy
In the UK, Australia and New Zealand books are sent out for a maximum of 28 days, after which they must be returned or paid for if they are not adopted for a course of 12 or more students. Outside the UK, Australia and New Zealand, inspection copies are sent as desk copies free of charge. Not all titles are available for inspection in all countries. Lecturers must complete and return the **Reply Slip** enclosed with each book.

Books not yet published will be sent in the month of publication.
